### **Seminar topic: Defense alone is a losing strategy - How to make more informed decisions on where to place your security team's effort and resources**

As a forum, we all know that AI-assisted cyberattacks are accelerating, with adversaries now using automation, reinforcement learning, and generative techniques to discover vulnerabilities and assemble attack paths faster than ever before.

As an industry, I'm sure that we are all acutely aware that traditional point-in-time audits/security validation or manual red teaming, cannot keep pace with this machine-speed threat landscape.

So, how do we, as an industry, try and defend against this significant threat.

One piece of the puzzle may be Continuous Automated Security Validation—that is, autonomous systems that operate safely in live environments, continuously probing defences, chaining realistic attack scenarios, and verifying resilience across thousands or even millions of assets without agents.

We'd like to show you how....

### **Presenter: Michael Gioia**

Michael Gioia is a Senior Solutions Architect at Asia Pacific and Japan Horizon3. With over a decade of experience in the cybersecurity industry, Michael brings 12 to 15 years of deep expertise across a wide spectrum of security domains.

His career has spanned the entire Asia Pacific region, where he has successfully partnered and assisted clients of all sizes—from nimble startups to large enterprises—across a diverse range of industry verticals with cutting edge vendor/oem capabilities from well-established companies as well as startups.

Much of his experience has been behind Detect & Respond with specialities including, EDR, NDR, ITDR, SIEM/SOAR. But most

recently, in the last two years, he has taken this pedigree to help force multiply and augment efficacy in Detect & Respond by representing Offensive Security capability..
